Variable Frequency

POWER-SPRAYS

Vibrating Tables Variable Frequency

Power-Sprays manufacture a wide range of vibrating tables which have been specifically designed for the Glass fibre Reinforced Concrete Industry.

Standard tables are produced in two sizes: 225cm x 120cm and 120cm x 120cm

Both sizes are constructed using Power-Sprays 'web-stiffening' system (as illustrated in the photograph). This system ensures that the vibration energy is distributed over the whole of the table's area and not just concentrated at the points where the vibrators are fitted.

Tables are fitted with twin adjustable vibrators and variable frequency control so that both the frequency and the amplitude of the vibration can be controlled.

Specifications

Weight	500kg (approx..)
Dimensions (Overall)	225cm x 120cm x 60cm
Vibrators	Twin 500W vibrators with adjustable amplitude
Electricity Supply	380V 3-phase 50Hz
Control System	Manually operated push button 'on/off control system with variable frequency control dial.
